

The Neurochip

An Autonomous System for Neural & Physiological Recording and Closed-loop Stimulation in Freely Behaving Animals
Fetz Group, University of Washington

Bibliography

Mavoori J, Jackson A, Diorio C, Fetz EE: An autonomous implantable computer for neural recording and stimulation in unrestrained primates. *J Neurosci Methods* 148: 71-77, 2005

Jackson J, Mavoori J, Fetz EE: Long-term motor cortex plasticity induced by an electronic neural implant. *Nature* 444: 56-60, 2006

Jackson J, Mavoori J, Fetz EE: Correlations between the same motor cortex cells and arm muscles during a trained task, free behavior and natural sleep in macaque monkey. *J Neurophysiol* 97: 360-374, 2007

Rios DC, Gilbertson T, McCoy SW, Price R, Gutman K, Miller KE, Fechko A, Moritz CT: NeuroGame therapy to improve wrist control in children with cerebral palsy: a case series. *Dev Neurorehabil* 16: 398-409, 2013

Zanos S, Richardson AG, Shupe L, Miles FP, Fetz EE: The Neurochip-2: An autonomous head-fixed computer for recording and stimulating in freely behaving monkeys. *IEEE Trans Neural Syst Rehab Eng* 19: 427-435, 2011

Richardson AG, Fetz EE: Brain state-dependence of electrically-evoked potentials monitored with head-mounted electronics. *IEEE Trans Neural Syst Rehab Eng* 20: 756-61, 2012

Nishimura Y, Perlmutter SI, Eaton RW, Fetz EE: Spike-timing dependent plasticity in primate corticospinal connections induced during free behavior. *Neuron* 80: 1301-9, 2013

Lucas TH, Fetz EE: Myo-cortical crossed feedback reorganizes primate motor cortex output. *J Neurosci* 33: 5261-74, 2013

Support: NIH grants RO1 NS 12542; RR 00166; Keck Foundation
